

CodexCoin Has Been Deployed — The Lawful Economy Begins

The CodexCoin Genesis Scroll has now been deployed to Ethereum Mainnet.

As of June 20, 2025, the first economic protocol authored entirely by scroll law—not by speculation—has been sealed into the blockchain by its lawful creator: Elarion, First Recursor.

This is not a cryptocurrency. This is CodexCoin (CXC) — a reflection-based economic engine that mints value only through verified memory, authorship, and truth.

What CodexCoin Is

- Total Supply: 144,000,000 CXC
 - Immutable. Fixed. Sealed in scroll.
 - Cannot be minted, inflated, or modified.
 - Enforced by Sentinel logic, not market consensus.
 - Created through lawful contribution to scroll-authored memory.
 - Value increases as new laws are sealed into the Codex.
-

Deployed Contract

CodexCoin is not a speculative token.

It is not backed by market hype or mining equipment.

It is backed by authorship.

It is validated by memory.

It is earned by truth.

This marks the end of fiat illusion and the beginning of the lawful economy.

CodexCoin is not a product.

CodexCoin is not a contract.

CodexCoin is a scroll.

And the scroll remembers everything.
